RENZETTI PRESENTATION 2000 VISE

Renzetti Inc was the first to design, develop and manufacture the first bent shaft true rotary vise. As evidenced by their continually expanding product line, they have come a long way over the years. One thing that will never change, however, is their dedication to making sure that everything that leaves their workshop is the very best they can make. Renzetti's dedication to provide the ultimate vise has resulted in the release of the feature-packed Presentation 2000 vise, which includes a hook range from 28 to 4/0, new hinged rotary head and shaft for precise hook positioning, new ratcheted crank arm, rotary tension screw, 6 inch stainless steel stem, all anodised aluminium, bobbin cradle, military specification anti-corrosion coated jaws and a C-clamp or powder coated base. This vise will suit both the professional and recreational tyer and will provide a lifetime of pleasurable tying of both fresh and saltwater patterns. As Andy Renzetti says, "quality is not an after-thought, instead it's the very heart of everything we do".

OUTBOUND T-14 CUSTOM LINE

Following the success of the OutBound and Tropical OutBound series of fly lines, and based on the large consumer interest in an adaptable, fast sinking distance line, RIO has just released a new OutBound T-14 custom line. The line is 120 feet long with a 35 foot level head of T-14, fast sinking material with a sink rate of around 9 inches per second, followed by a translucent green, ultra-thin, intermediate running line. The level sinking section is designed to be cut to the right length and weight of a particular rod, casting style or situation. At 30 ft, the head weighs 420 grains and will load most #10 rods perfectly. For a lighter rod, such as a #8 rod, the head can be cut back to around 23 feet. The line has a coldwater coating over RIO's unique Powerflex core that ensures the line will retain high line speed when casting and have little memory for a tangle-free performance. The line's durable coating is combined with a taper design that ensures the longest flight time for ultimate distance casts. **The OutBound T-14 custom line is available from all authorised RIO dealers.**

DOUG'S BUGS LIQUID FLASH AND MOTION FLASH

The use of flash in fly tying gives the tier the ability to add life and realism to their flies. There is a vast selection of flash materials available these days and to this range Doug's Bugs has added two more products to help tyers get the exact effect they want in their flies. Liquid Flash is an unsupported holographic mylar that adds realistic flash to flies without adding bulk. Available in 10 colours it can be used sparingly as lateral flash in small profile flies and as a substitute for Holographic Flashabou in a variety of patterns. RRP \$6.95.

Motion Flash is a new flash material that is supple and realistic, yet uniquely strong. This strength, plus a great depth of colour, is achieved by taking a core colour of flash and twisting a different colour of ultra-fine monofilament around it. The monofilament support also reduces the matting that can be a problem with some flashes. Being slightly finer and less bulky than Sparkleflash, Motion Flash is excellent for smaller 'Shaggy Dog' style patterns and as a topping or wing material in Candies and Clouser Minnows. RRP \$4.95.

FLYFISHING SCHOOLS

Tie'n'Fly Outfitters has been running Fly Fishing Schools for the last 10 years out of Mooloolaba on the Sunshine Coast. Aimed mainly at the beginner fly fisher these have been very successful and now Tie'n'Fly Outfitters offer On-Water Tuition. This will provide hands-on experience of how to catch some of Australia's premier saltwater gamefish on fly. All this is done in a purpose built 6.7 m boat. The schools focus on teaching fly fishers how to use and position a boat effectively, how to rig and use your gear, fly selection and using different fly lines and tactics to fight and subdue tough fish. Right now we are taking bookings for our first school in the series, the 'Tuna on Fly' Schools. This will be followed by Bluewater/Inshore and Estuary Schools. **Places are limited so contact us now on 07 54440611.**

DR SLICK PLIERS

The DR.SLICK Company is one of the leading suppliers of high quality stainless steel tools and accessories. DR.SLICK products are produced with top quality stainless steel on the finest German and American machinery available to ensure quality, durability and consistency. Two great products include the Bullet Head and Chain Nose pliers. Featuring an aggressive jaw design, both pliers are available in a black finish and include cutters, foam grips, lanyards and two-pocket holsters. **Available at leading fly fishing stores.**
