SNOWBEE BACKPACK AND CHEST PACK

A lightweight backpack designed for traveling light. Constructed with 210 denier, rip-stop ballistic nylon the backpack has a thick, contoured back panel and adjustable, padded shoulder straps. The slim line design allows you to fish in comfort, with the bag on! The back panel and shoulder straps are lined with an air-mesh material to allow air circulation to keep you cool. In addition the outer fabric has a DWR (Durable Water Resistant) coating to prevent water absorption. The rear compartment has a double zip entry, a rear zipped pocket, a front mesh pocket and an elastic strap to hold fly boxes in place.

The front pocket features a hinge-down front panel, with a velcro ripple-foam fly patch. In the back of the pocket is a further elastic strap to hold fly boxes in place. On the front of this is a further triple pocket for leaders and accessories.

Two small mesh side pockets for 'lotions & potions' plus ample hanging loops and straps, complete the package. Our new chestpack is designed for the fly fisher who wants to travel light, but have enough storage for all the essentials.

EVINRUDE E-TEC 2008 MODELS

BRP are proud to unveil the exciting Evinrude E-TEC range for 2008 which boast innovations such as New Injector Technology, Iridium Spark Plugs and Multi-Point Oiling. Mid-range users will love the new 2-cylinder 40, 50, 60 DSL models in the sparkling and eye-catching all-white colour scheme. A 3-cylinder 75 DSL is now also available in the same configuration as last year's 90HP. The functional comforts of a tiller handle with horizontal and vertical adjustments, a trim and tilt switch within 'thumbs reach' and the ease of starting with push button or key switch are all on offer in the new 40, 50 and 60 DTL engines. Boaters who appreciate the superior thrust and manoeuvrability of twin applications will be impressed by the new V6 propelled 115 DCX offering counter rotation.

HARD FLUOROCARBON LEADER

Sunline has released their top-of-the-line FC material in 50 m spools. With superior knot strength, straight strength and abrasion resistance, V-Hard has what it takes to land fish where others fail. Parallel spooling. Available in 2 lb through to 20 lb.

SCOTT S4 FLY RODS

Scott Fly Rods have introduced the S4 range of premium fresh water rods in time for 2008. These rods represent their finest achievement in fast action fresh water fly rods and come packed with custom features. The rods are fitted with the finest guide sets – Fuji Concept SiC stripper and REC Recoil snake guides. The REC anodised reel seat features titanium colouring and an extra select Buckeye Burl insert on all models up to 9' 6 weight, which have a Western style grip. All 9'6" rods as well as the 7 and 8 weight 9 footers have a full wells grip and REC titanium anodised reel seat. All rods feature titanium fly keepers, measuring wraps, alignment dots and are of 4 piece construction.

Scott S4 fly rods are built on grey UV coated blanks and come protected in an aluminium tube in line weights 3 through 8. All Scott rods come with a Lifetime Warranty to the original owner. Ask for them by name at your local fly shop.

Direct trade enquiries to Paul Wright at One Fly phone 0411 671 146 or check out www.scottflyrod.com.

JM GILLIES FLY BOXES

Representing excellent value for money, the new range of Gillies Medium Fly Boxes have positive locking latches, waterproof seals, are impact resistant and are available in three functional designs. The larger boxes suitable for bass and saltwater flies come in two standard designs.

SCIENTIFIC ANGLERS SHARKSKIN LINE

Scientific Anglers new Sharkskin technology takes fly lines to a whole new performance level. You will not believe how it casts and floats. Sharkskin technology is a precise texturing process that embosses the surface of the fly line coating with a repeating geometric micro-pattern. The finished surface is no longer smooth, no longer exhibits unwanted line flash and can be optimised to yield greatly improved flotation, casting performance and overall line suppleness and durability. This line floats substantially higher, minimises line flash, lasts three times longer and casts further than any other. Currently available as a floating line in their WF configuration Trout Taper (3-8 weights), this 100 foot line is excellent as a light flats, bream and bass fly line and includes pre-welded loops, AST and Dry Tip technologies.

Available in chartreuse or blue heron colours from all Scientific Angler Mastery dealers.
